

Marketing Cloud Advanced Demo Guide

RELATED RESOURCE: [DEMO SETUP GUIDE](#)

Approximate Demo Time: 15-20 minutes
Last updated: Tuesday, October 22, 2024

Demo Team

Chelsea Cordova, Lead Solution Engineer
Dana Peterson, Lead Solution Engineer
Eric Chang, Sr. Solution Engineer

Demo Summary

This demo follows a story of a marketer at Quadstar, a telecommunications company that provides products and service to residential and business consumers. As a marketer, we are running a campaign to promote a new service offering that may be attractive for both types of customers. Quadstar uses Marketing Cloud on Data Cloud to target, create, execute and analyze their promotional campaign, all without leaving their single source of truth. With Salesforce, Quadstar is able to deliver a seamless, connected, and personalized customer experience for their valued customers.

 **CHAPTER 1: CAMPAIGN CREATION WITH CAMPAIGN AGENT**

 **CHAPTER 2: CAPTURE AND PROCESS LEADS**

 **CHAPTER 3: AUTOMATE AND EXECUTE**

- **Brand Center:** pre-requisites required 
- **Advanced Personalization with Cross-Object Merge Fields:** pre-requisites required 
- **Dynamic Content:** pre-requisites required 
- **Path Optimizer:** ⚡ Advanced Feature - pre-requisites required 
- **Conversational SMS:** ⚡ Advanced Feature - pre-requisites required 

 Optional Chapters:

- [SMS](#)
 - [Scoring](#)
-

Click Path & Talk Track

Setting the Stage:

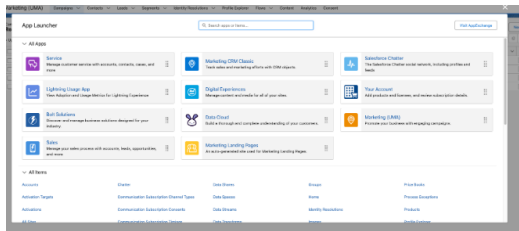

Today we'll be taking a look at Marketing Cloud Growth. Marketing Cloud Growth gives small business marketers access to Einstein Generative AI and Data Cloud for the first time, allowing these marketers to work on the same platform as sales,

service, and commerce teams, allowing for more connected and personalized customer journeys.

We'll be looking at "Quadstar" - a telecommunications company that provides products and services to residential and business consumers. As marketers at Quadstar, we are running a marketing program for a new service offering.

CHAPTER 1: CAMPAIGN CREATION WITH CAMPAIGN AGENT

Screenshot

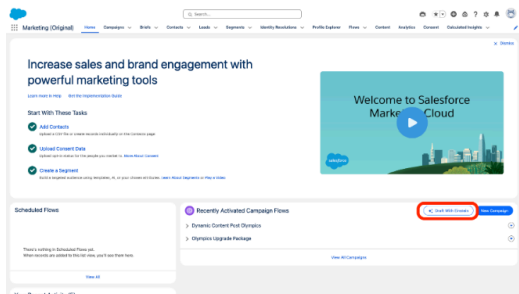

Clickpath

- Click App launcher
- Click 'View all'
- Select Marketing

Script

We'll begin by navigating to the new Marketing app via the app launcher. Here you'll be able to access all Salesforce apps including Sales and Service, **making it easy to switch between apps without ever leaving the Salesforce platform.**

Screenshot

Clickpath

- Briefly scroll through homepage to show features
- Click 'Draft with Einstein'

Script

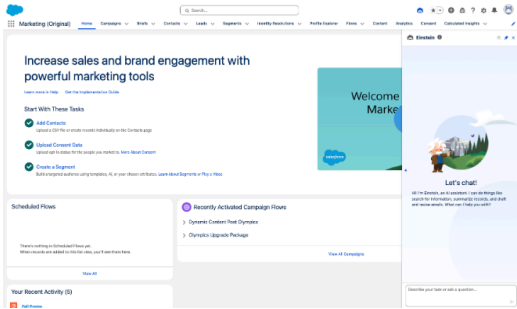

When we first arrive on our homepage, we can see an introductory video on Marketing Cloud and step by step guidance for new users on how to get started creating a campaign. For users who are already familiar with the platform, they can see their current campaigns. This is going to be helpful as our marketing efforts expand.

We'll start the campaign creation process with some help from AI by 'Drafting with Einstein'.

Screenshot

Clickpath

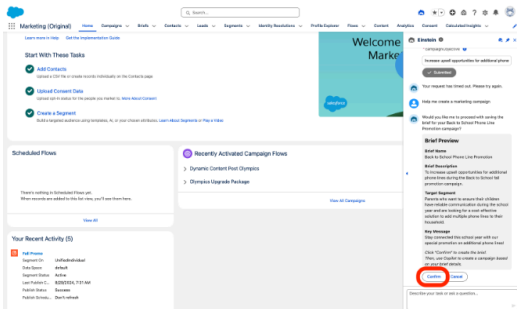

- Complete the Campaign Objective = 'Increase upsell opportunities for additional phones devices and lines highlighted in this current fall and winter promotion campaign for residential and business customers'
- Hit Enter

Script

I can immediately see my Campaign Agent begin to engage with me and ask for details around what I'd like to do for this campaign. The first step is for Einstein to understand what the key objective of my campaign is so a tailored brief can be created.

Screenshot

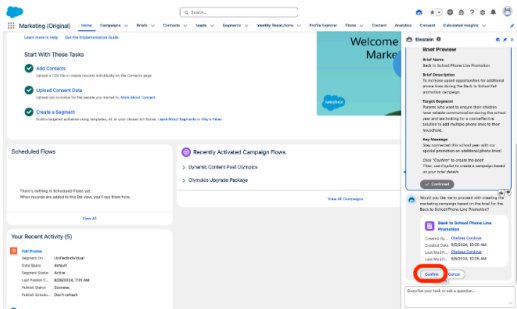

Clickpath

- Click 'Confirm'

Script

Within a few seconds, the Agent returns with a brief generated for me to review and confirm grounding details for accuracy. These details, like the description and key message will influence how other campaign elements and content will be created for my marketing initiative.

Screenshot

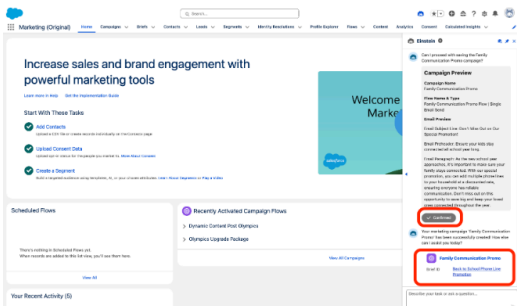

Clickpath

- Click 'Confirm'

Script

Next the Agent is ready to create the campaign based on the inputs recorded in the brief.

Screenshot

Clickpath

- Click 'Confirm'
- Click the hyperlink to your campaign to edit your campaign elements

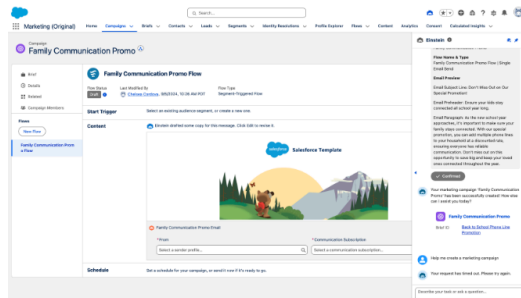

Script

As I interact with the Campaign Agent, each step of the way is keeping our human in the loop and confirming details for accuracy and further informing our agents and models. Einstein will now create a campaign for me based on those confirmed inputs

and share a preview of the content that will be created in just one click.

Immediately in my chat with Einstein, I am presented with the draft campaign ready for me to put the finishing touches on.

Screenshot

Clickpath

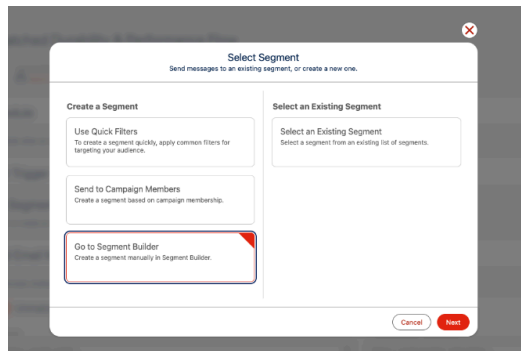

- Once in the campaign, close the Einstein agent chat
- Click 'Select Segment'

Script

As I click into the campaign, Einstein is going to follow along with me throughout my creation process to help answer any questions or guide me as I execute.

We'll start by attaching an audience to our campaign that has been drafted by Einstein.

Screenshot

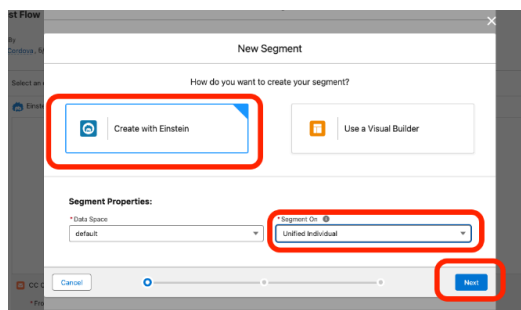

Clickpath

- Select 'Go to Segment Builder' under Create A Segment

Script

Screenshot

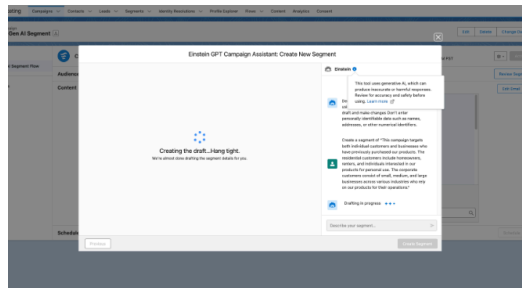

Clickpath

- Ensure 'Create with Einstein' is selected, segment on = Unified Individual
- Select 'Next'

Script

We'll select 'Create with Einstein' where our original brief details will influence how our target audience is created - **Einstein is using natural language based on our campaign object for this segment.**

Screenshot

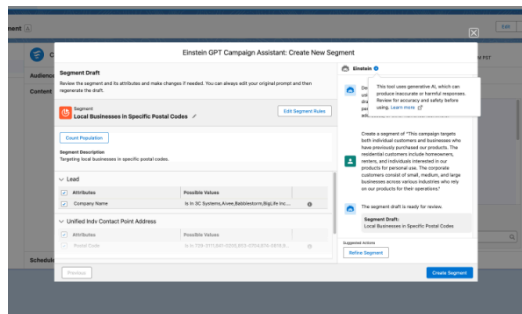

Clickpath

- Review attributes that Einstein has pulled to create segment

Script

While Einstein is pulling together different attributes for my segment, I can see the specific prompt that is being used as the baseline for this audience. **Einstein is taking the manual work off of my plate and using Quadstars' unique dataset to generate this segment.**

Screenshot

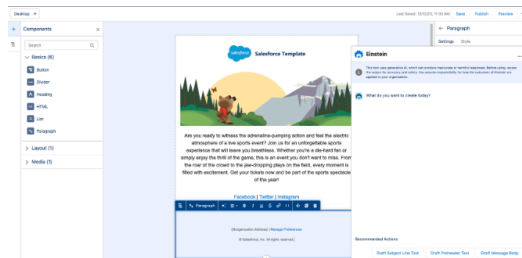

Clickpath

- Scroll through attributes that Einstein has pulled to create segment
- Click 'Create Segment'

Script

Now that my segment is drafted, I can see the different attributes Einstein has pulled in to create this segment. I can ensure that these fields are correct for our audience and even append to, or refine what Einstein has already created.

Screenshot

Clickpath

- Click 'Edit Email'
- Highlight drafted content

Script

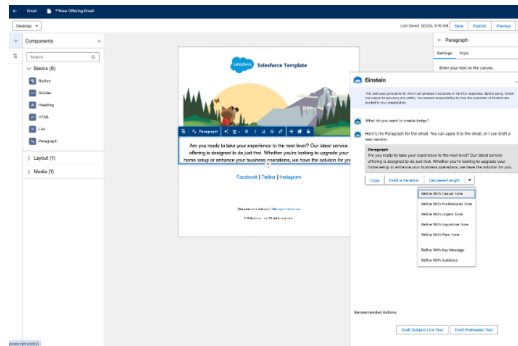

Next I'll review our email. Once in the email builder, I can see that **AI has saved us time** and drafted the message content, subject line, and preheader information based off our campaign brief.

Screenshot

Clickpath

- Click "Einstein" assistant
- Click 'Draft Body Message'
- Click 'Decrease Length'
- Click 'Apply'
- Check the box and click Continue

- Save and publish
- Use back icon on editor to get back to campaign

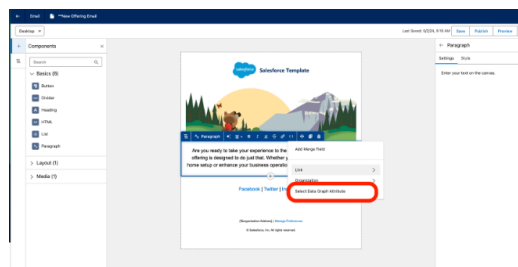

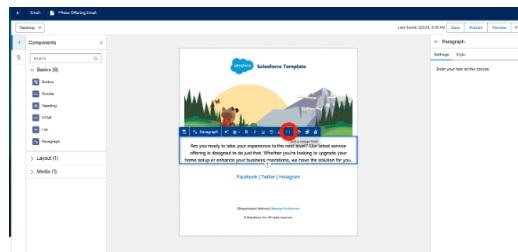

Script

Additionally, I can draft new content using generative AI by clicking into my Campaign Agent. I'll start by reviewing the body message. **Einstein is able to use my original prompt to build out a draft of the content of my communication**, I can also interact with Einstein to modify what's already been created, for example changing the tone, decreasing the length of copy and more. After a couple of clicks, new body content is created.

ADVANCED PERSONALIZATION OPTIONS

PERSONALIZATION WITH CROSS-OBJECT MERGE FIELDS

Screenshot

Disclaimer: Your org must have the necessary setup completed for this section to be viable for a demo. Setup instructions can be found here - please draw your attention to section xx for cross-object personalization setup instructions.

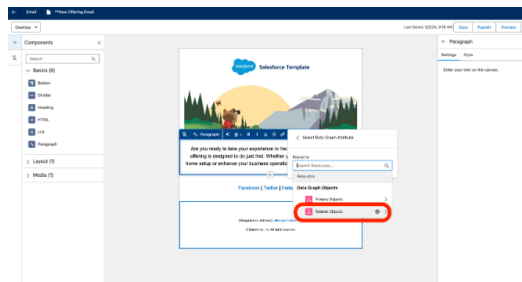

Clickpath

- Click into content
- Select the [] icon to insert a merge field
- Choose 'Select Data Graph' > 'Resources' > 'Related Objects' > 'Unified Link Individual' > 'Individual' > 'Account Contact' > 'Account' > 'Product' > 'Product Name'

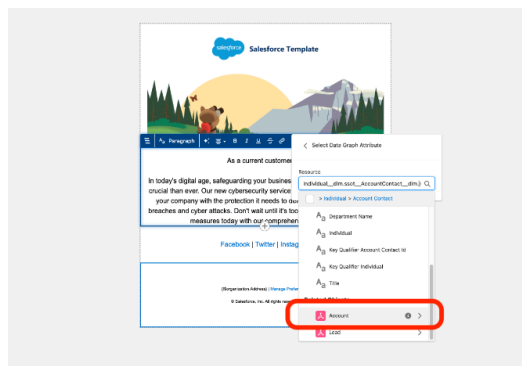

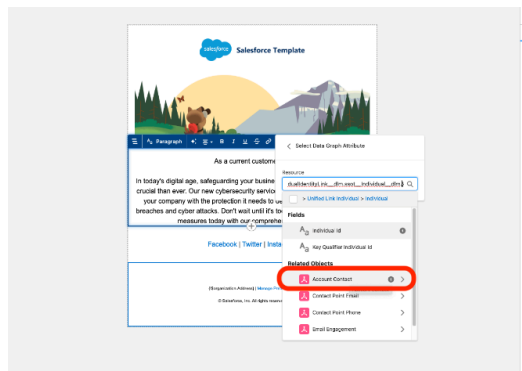

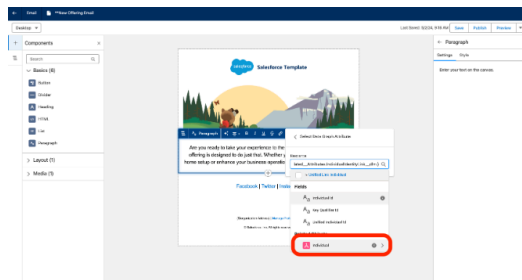

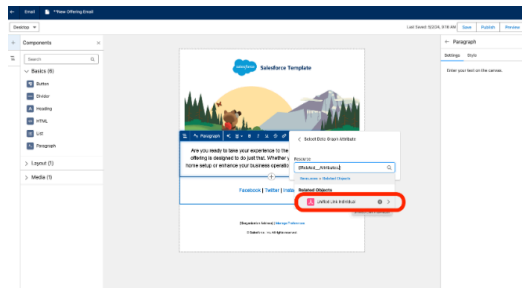

Script

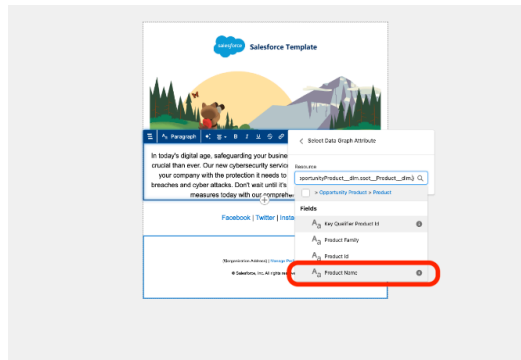

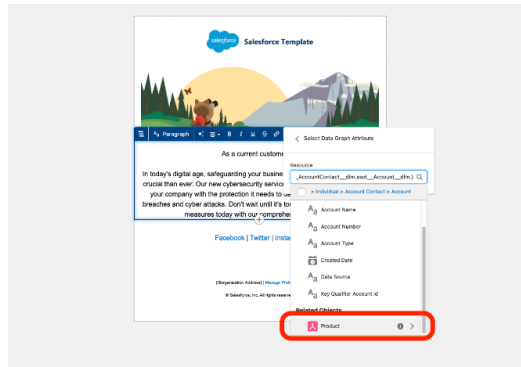

We're well on our way with our email creation, but I want to personalize this communication further. Since we're targeting a mix of customers, I want to **pull in relevant product ownership information but at scale**. I'm going to use our newest feature, cross-object personalization.

With Data Cloud as our foundation, I now have access to a vast library of datasets that are associated to the unified individual. Here, I can easily navigate from the individual, to the account, right down to the associated product ownership information. In my example, I'm including a nod to the product that existing customers currently own and dropping that value in this merge field by selecting

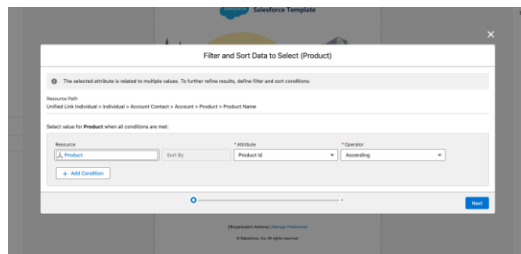

'Product Name'.

Screenshot

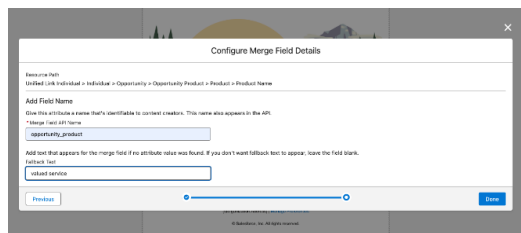

Clickpath

- Click 'Next'
- Attribute = Product ID
- Operator = Ascending
- Click 'Next'

Script

Our customers may have multiple products associated to their accounts, with that in mind, I have the ability to filter and sort the data to ensure I'm **surfacing the most recently updated, or purchased product, making my personalization more relevant to the final recipient.**

Screenshot

Clickpath

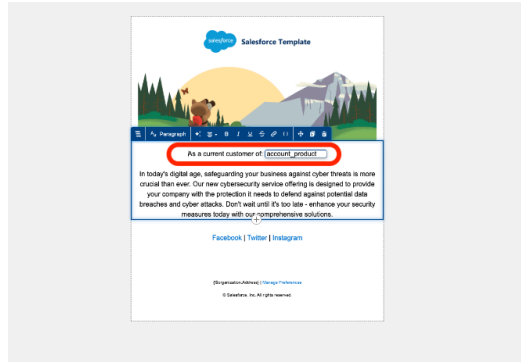

- Merge Field API Name: account_product
- Fallback text: our products and services
- Click 'Done'

Script

In the event that we have incomplete data for an individual in this campaign, **I can include fallback**

text to ensure no black space occurs for those records.

Screenshot

Clickpath

- Type greeting line: "As a current customer of "

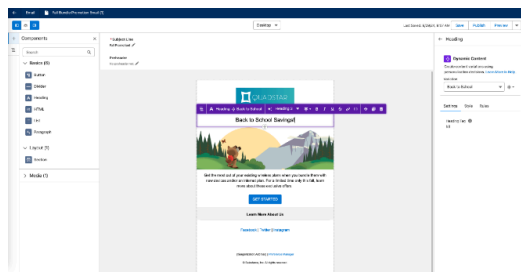

Script

We can now add our warm greeting and thank you copy before the merge field within the content editor.

This is a simple example, but access to cross-object merge fields will unlock new potential for campaigns I can run in the future.

DYNAMIC CONTENT

Screenshot

Clickpath

 **Disclaimer:** Your org must have the necessary setup completed for this section to be viable for a demo. Setup instructions can be found here - please draw your attention to section xx for dynamic content setup instructions. This is a screenshot may not be reflective of your org. 

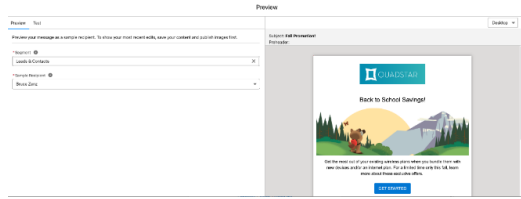

- Click "Edit"
- Click into Header Box
- Click Dynamic Content
- Click "Rules" on right hand panel
- Click "Edit"
- Click "Preview"
- Select "Leads and Contacts" Segment
- Toggle between the first few leads to see different content

Script

I'm well on my way with the email creation, but I want to personalize this communication further. **I want to show different content to different members of my target segment, but do so at scale, with the new dynamic content element.**

With Dynamic Content, I can create multiple variations of the content I want to show customers based on their attributes. With Data Cloud as our foundation, I now have access to a vast library of

datasets that build out a rich profile of attributes from my segment.

With the same email template, I can now preview the different versions of my email that my targeted segment will see based on their individual attributes.

CHAPTER 2: CAPTURE AND PROCESS LEADS

Screenshot

Clickpath

- Select 'Campaigns' tab
- Select 'New'
- Enter Campaign Name: New Service Offering Interest
- Enter additional details as optional

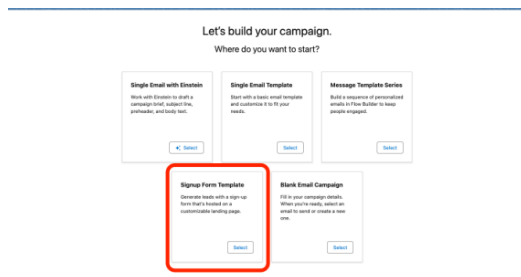

Script

The next step for our Marketers, is to create a registration form and landing page for our campaign.

Campaign details can be filled in to include the timeframe of when the campaign is running, how much the campaign costs and expected revenue to be generated.

The campaign details will be important in calculating the effectiveness and ROI of the program that we are running.

Screenshot

Clickpath

- Select Signup Form Template

Script

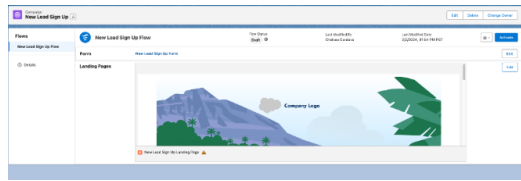

Upon saving, **we're provided with some ready-to-use templates** to select as a base for our campaign.

We'll start by selecting the template for a Signup Form - in order to capture interest in our new service campaign.

Screenshot

Clickpath

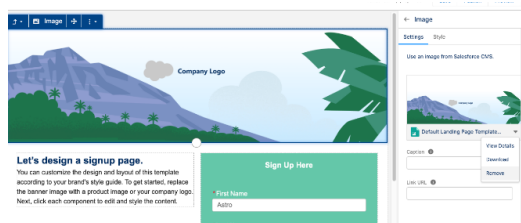

- Click 'Edit' on the Landing Page line

Script

The campaign template we have selected includes a lead capture form, corresponding landing page, and a dynamic lead processing flow to **ensure consistent and standardized processing for individuals that engage with the content.**

Screenshot

Clickpath

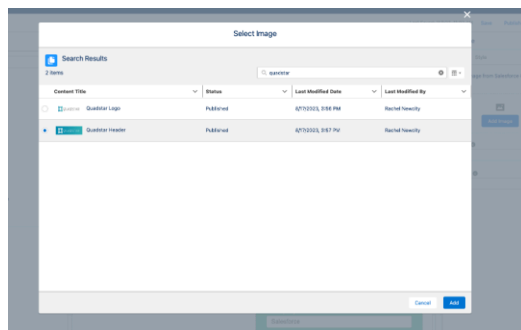

- Click on the header image
- In the right side panel, use the drop down to 'remove'

Script

First, we want to edit the landing page and swap out the header image to include Quadstar's logo.

Customizing content is easy to do with our drag and drop user interface. Whether it's Landing Pages like we see here, forms, or email templates, marketers will have a consistent user experience through this familiar interface.

Screenshot

Clickpath

- Click "Add Image"
- Search "Quadstar" and click enter
- Select "Quadstar header"
- Click "Add"

Script

After removing the default header, we are able to reference a library of available assets and select the correct image for this landing page.

BRAND CENTER

Screenshots

 **Disclaimer:** Your org must have the necessary setup completed for this section to be viable for a demo. Setup instructions can be found [here](#) - please draw your attention to section 19 for brand setup instructions. 

Clickpath

- Select Brand

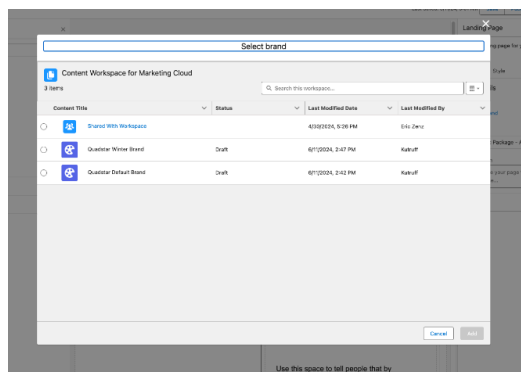

Script

Now that we have replaced the logo - I have the

ability to further **uplevel my page by associating a brand for a consistent look and feel of the page.**
Here I'll select my Quadstar Summer Branding.

Screenshot

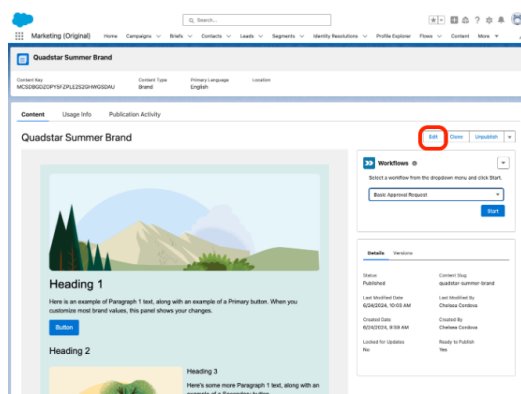

Clickpath

- Select the 'Quadstar Summer Brand'
- Click 'Add'

Script

Quadstar has always had brand standards that are difficult to manage across users, brands and workspaces. By using this brand asset, **I can easily skin the look and feel of my page with one click.**

Screenshot

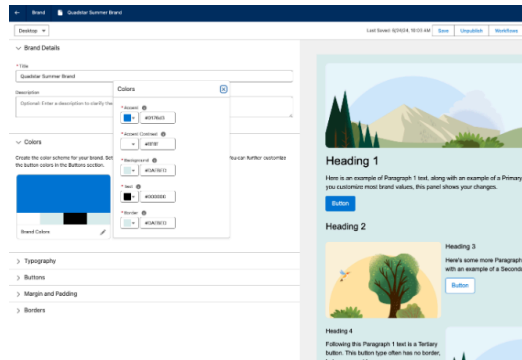

Clickpath

- Open 'Content' in another tab
- Confirm you are in the '**Content Workspace for Marketing Cloud**' workspace
- Select your 'Quadstar Summer Brand' asset created in the pre-req steps

Script

With Brands, management and standardization is going to be easier than ever. In the Content management section of Marketing Cloud, I can access existing and create new brands as my company's identity evolves.

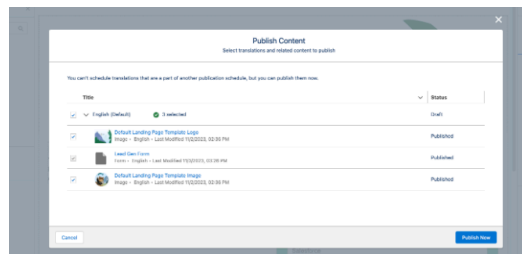

I can customize brand details by giving it a descriptive name, defining the hex codes of their brands, typography, button styling, margin and paddings as well as borders. These styling configurations don't just apply to our landing pages either, they will be reflected and available in emails to **ensure a consistent customer experience from all**

touchpoints.

And I **only have to configure it here once**, making it available for all users who are running different campaigns in the platform.

Screenshot

Clickpath

- Click save and publish
- Click publish now
- Hit the back arrow (top left corner)

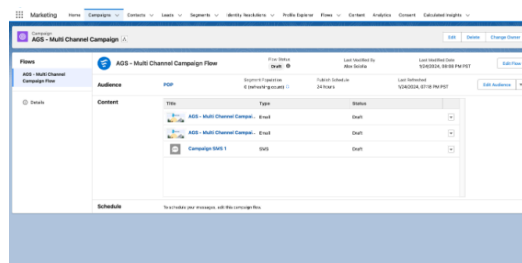

Script

Once we are happy with the updates, we can save and publish the landing page. By publishing the landing page, we are **publishing the form and activating the related flow that will be creating new leads and updating existing records in our database. And we're doing this all with one click.**

We have now successfully created a campaign that captures new leads, updates existing records and maps data from inputs directly back into our database, all without manual data entry or management required.

CHAPTER 3: AUTOMATE AND EXECUTE

Screenshot

Clickpath

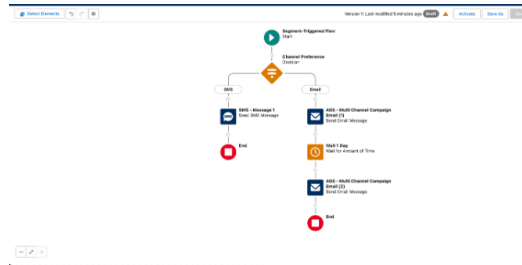

- Populate a new tab with the following steps
- Click 'Flows' tab
- Click into '**Your Flow Name**' - you would have created this during demo org setup steps
- Click 'View Flow'

Script

With our marketing assets drafted, let's put the campaign in gear by orchestrating a flow.

As our Marketing efforts and needs evolve, multi-step campaigns become top of mind for us, so we can **scale our time, automate and streamline processes, and stay top of mind for our customers.**

Screenshot

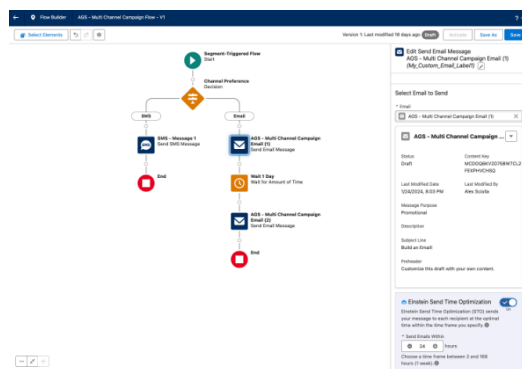

Clickpath

- Mouse over various elements in the flow as you speak through the downward path

Script

Our campaign's flow starts when the targeted segment enters. Then their channel preference is evaluated, and depending on whether it's SMS or Email, they'll be sent down the appropriate path - **ensuring that we reach our customers at the right time, with the right message, on the right channel.**

Screenshot

Clickpath

- Double click the first email element
- Scroll up and down the email info panel on the right
- Toggle Einstein STO on

Script

Displayed for us here in this panel are the various configuration settings for this email message. We can take advantage of more Einstein AI capabilities with Send Time Optimization to ensure **we're delivering this message at the most optimal time for each recipient - without ever leaving the flow canvas.**

Screenshot

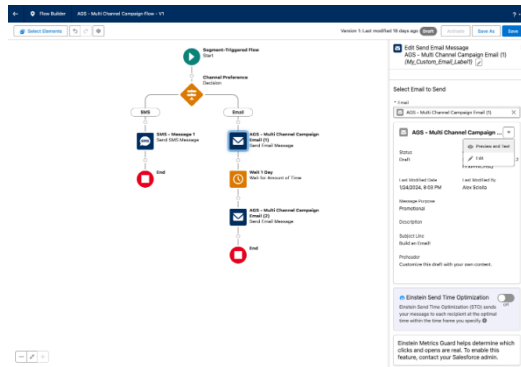

Clickpath

- Click the drop down button next to the email title

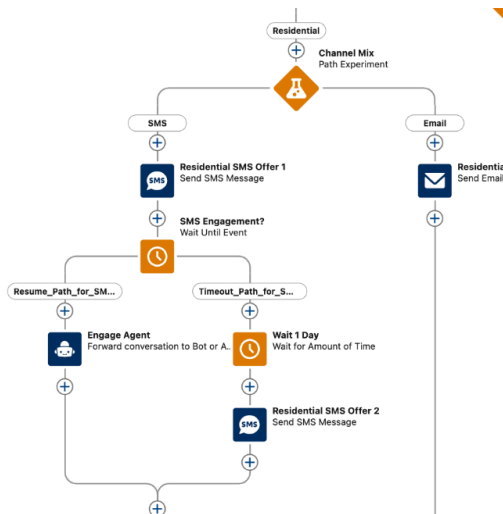

Script

Last but not least, if we need to make content modifications or preview our work before activating, we have the ability to do so, by selecting those options directly from this screen.

⚡ ADVANCED FEATURE: PATH OPTIMIZER ⚡

Screenshot

Clickpath

- ⚠️ Disclaimer: This is a screenshot of a different flow. Check Demo Org if there is a pre-built one or edit an existing flow to show Path Optimizer ⚠️

Script

In this example Residential path, I want to test different channels to see what is more effective with that audience. I have the ability to create a Path Experiment (or A/B test) and split my audience, so 50% receive the email communications, and the other half receive SMS.

⚡ ADVANCED FEATURE: CONVERSATIONAL SMS ⚡

Screenshot

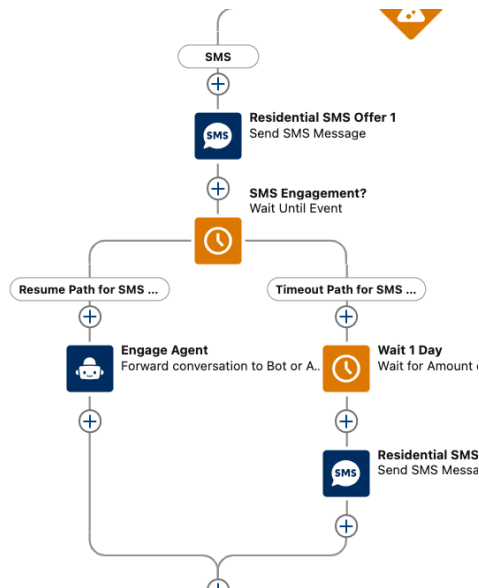

Clickpath

- ⚠️ Disclaimer: This is a screenshot of a different flow. Check Demo Org if there is a pre-built one or edit an existing flow to show Conversational SMS ⚠️

Script

Within the SMS path, I am also going to incorporate our new Conversational SMS capabilities, which allows me to automate the customer interaction from the promotion I am sending out, all the way to conversion without engaging a human.

In the initial SMS promotion, we are offering

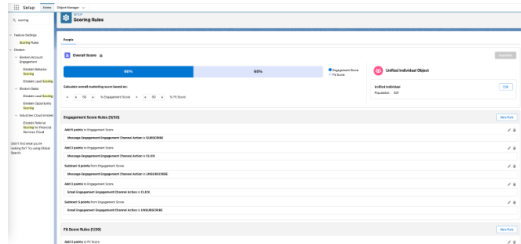

customers to add a new phone line at a discounted rate for our Back to School campaign. If the customer responds 'YES', we have added in an event to forward to a self-service bot experience.

This experience provides a seamless handoff from a marketing promotion to conversion, right from within the SMS engagement. I'm even able to share the engagement insights and data to my cross-functional teams to breakdown department silos so these experiences can truly be connected. New conversions can be created from a promotion immediately, whereas previously, would have been a one-way experience.

252 RELEASE - ENGAGEMENT SCORING

Screenshot

Clickpath

- Navigate to the Gear Icon → Setup
- Search for Scoring Rules

Script

- As customers interact and engage with your marketing content, you can score those leads and contacts based on that engagement and how closely they resemble your ideal customer. You can customize the default scoring rules and decide how engagement and fit scores factor into the overall marketing score for a lead or contact. Use the engagement, fit, and overall marketing scores to build segments and create targeted content.

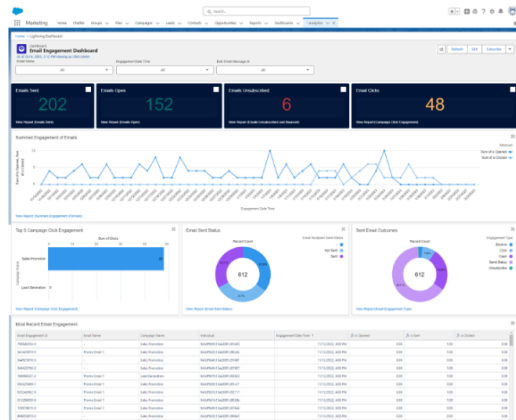

CHAPTER 4: REPORTING AND ANALYTICS - TO BE UPDATED

Screenshot

Clickpath

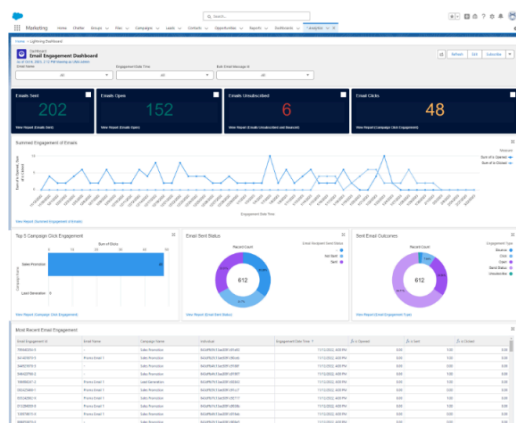

- Flip to next tab with Analytics pulled up, or click into Analytics tab at the top navigation - Analytics are currently empty please use the Figma found here to demo.
- Click into Email Engagement Dashboard

Script

Now that we've created campaigns to send personalized content to our targeted audience, **we can have a comprehensive analytics view of campaign performance and understand key metrics at a glance.**

Screenshot

Clickpath

- Scroll through the Dashboard

Script

Intuitive, OOTB dashboards serve as your mission control for campaigns. They provide instant insights for email, SMS, forms, and landing pages. **These are designed for marketers to be able to quickly gain actionable insights on top performing campaigns, conversion rate, form submissions and more.**

Screenshot

Clickpath

- Highlight the filters at the top for Campaign Name

Script

We can use filters to easily segment the dashboard view to find insights across all campaigns or drill into a specific campaign.

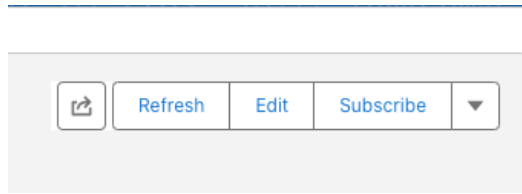

Whether you're assessing overall campaign health or drilling down into specific metrics, our platform **empowers you to make data-driven decisions effortlessly.**

Screenshot

Clickpath

- Highlight options in the upper right to

"Subscribe"

Script

We can view analytics directly in the platform, or use the subscribe option to send insights directly to our team's inbox on a set schedule, to keep our team aligned on performance metrics.

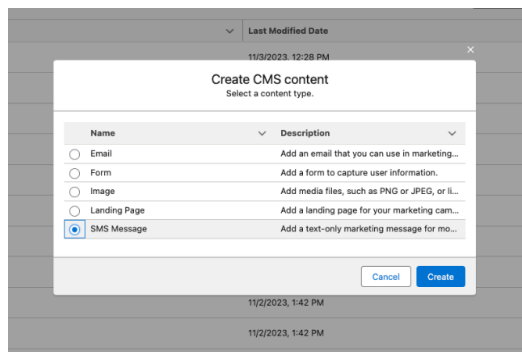

Conclusion:

Today we've seen how Marketing Cloud Growth will enable small business marketers to create targeted campaigns and content quickly, increasing their speed to market using Generative AI. All while working on the same platform as sales, service, and commerce teams, allowing for more connected and personalized customer journeys.

ADDITIONAL CHAPTERS

SMS

Screenshot

Clickpath

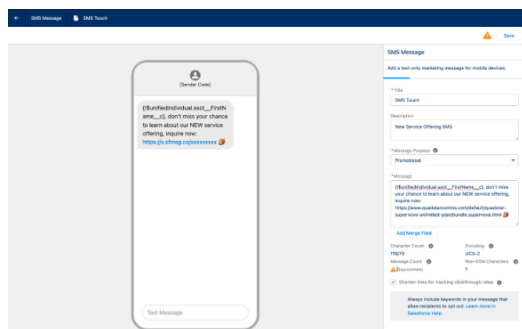

- Click the Content Tab
- Click 'Content Workspace'
- Click 'Add > Content > SMS Message'

Script

Now that our email is finalized, we also want to create content for customers that prefer to engage via SMS.

Marketing Cloud Growth offers the flexibility of delivering those messages across different channels, including SMS in the same campaign.

Screenshot

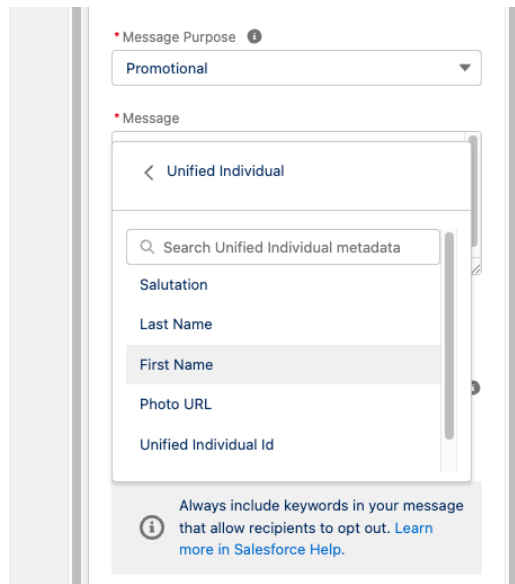

Clickpath

- Title: SMS Touch
- Description: New Service Offering SMS
- Message: Don't miss your chance to learn about our NEW service offering, inquire now:

Script

Creating the message is simple with the completion of a few fields.

Screenshot

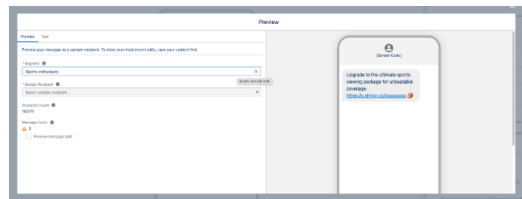

Clickpath

- Click into the message section on the right panel
- Insert merge field
- Click Unified Individual
- Click First Name

Script

To further personalize our SMS communication, merge fields are available to drop into our message. These fields will dynamically display content based on each unique recipient to ensure we are **delivering the most personalized experience at scale.**

Screenshot

Clickpath

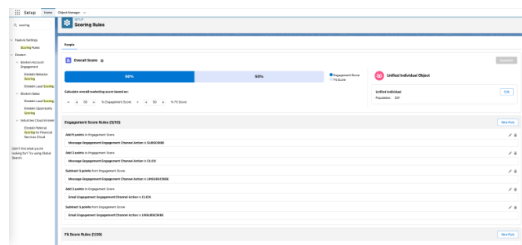

- Click save
- Click Preview
- Under "Segment" Select [Segment Name]
- Under "Sample Recipient" select any name

Script

Finally we're able to preview and test the message (even as a test recipient) to confirm everything is populating as expected.

SCORING

Screenshot

Clickpath

- Navigate to the Gear Icon → Setup
- Search for Scoring Rules

Script

- As customers interact and engage with your marketing content, you can score those leads and contacts based on that engagement and how closely they resemble your ideal customer. You can customize the default scoring rules and decide how engagement and fit scores factor into the overall marketing score for a lead or contact. Use the engagement, fit,

and overall marketing scores to build segments
and create targeted content.
